PROFESSIONAL SUMMARY

Computer Engineering graduate and full-stack web developer who builds secure, thoroughly tested applications with Next.js, React, Node.js, Express, and TypeScript. Delivered an automated release management system during internship that replaced manual releases and built a full-stack platform with 605+ automated tests and CI/CD deployment. Seeking a junior full-stack role where I can ship reliable, production-ready features, strengthen code quality through testing and review.

SKILLS

Languages & Frontend: JavaScript, TypeScript, Python, PHP, Java, HTML5, CSS3, React.js, Next.js, Tailwind CSS, Three.js

Backend & Databases: Node.js, Express.js, Django, RESTful APIs, JWT, OAuth, Zod, MongoDB, MySQL

Testing & DevOps: Jest, Vitest, Supertest, Git/GitHub, GitHub Actions, Docker, CI/CD, Vercel, Render

Tools & Practices: Agile/SDLC, Postman, Figma, GitHub Copilot, Claude Code, Codex

WORK EXPERIENCE

Web Development Intern | OJT **Jan 2026 – Mar 2026 (360 hours)**

Ordlabs / Encapoma Consumer Goods Retailing — Cagayan De Oro City, Philippines

- Contributed to a 5-person Agile team delivering internal web applications, including a web-based inventory and accounting system supporting day-to-day business operations, following SDLC practices from planning through release.
- Built the App Release Management System (ARMS) with Next.js, Node.js, Express.js v5, and TypeScript, replacing manual website and application releases with an automated, repeatable release process.
- Secured ARMS with authentication and authorization, Zod environment/DTO validation, Helmet and CORS middleware, and Morgan request logging, verifying protected routes and input validation through Jest and Supertest API tests.
- Applied CI/CD and Git/GitHub workflows with structured code reviews, and supported testing, deployment, and client support under senior developer guidance, contributing to reviewed and tested releases.

PROJECTS

Progress | Personal Project – Full-Stack Web Application *progress-developer.vercel.app*

Next.js, TypeScript, Tailwind CSS, Node.js, Express.js, MongoDB, Mongoose, Zod, JWT, OAuth, Vitest, Supertest, GitHub Actions, Docker

- Built a full-stack project and task management platform with a responsive Next.js dashboard and RESTful API (Node.js, Express.js, TypeScript), supporting project and task CRUD, search, filters, status tracking, and collaborator assignment, with a public landing page scoring 100 on Lighthouse Performance, Best Practices, and SEO on mobile and desktop.
- Implemented secure authentication (JWT with HTTP-only cookies, email verification, password hashing, OAuth via GitHub, Google, Facebook, LinkedIn) and role-based project authorization, hardened with Zod validation, CORS, and rate limiting to protect user accounts and restrict access.
- Developed and tested 605+ automated tests across 53 test files, covering unit, integration, API, and end-to-end scenarios, achieving 99%+ coverage across statements, branches, functions, and lines.
- Implemented CI/CD with GitHub Actions to automate TypeScript checks, test execution, application builds, and Docker image validation; containerized the backend using a multi-stage Dockerfile and configured Render deployments to wait for successful CI checks.

Real Estate Website Redesign | Web Developer Assessment *marci-metzger-tan-tau.vercel.app*

Next.js, TypeScript, Tailwind CSS, Three.js, Brevo, Vercel

- Built and deployed a responsive real estate website on Vercel with Next.js, TypeScript, and Tailwind CSS, featuring an interactive Three.js 3D hero, scroll animations, and reduced-motion support, achieving Lighthouse Performance scores of 95 (mobile) and 100 (desktop) and 100 for Best Practices and SEO.
- Implemented a lead-generation contact form with server-side validation and Brevo email delivery, so visitor inquiries reach the agent directly, and added searchable sample property listings and an embedded Google Map.

Q-Vision: Audio-Haptic Assistive Eyewear for Blind Individuals | Thesis (Co-Leader)

Raspberry Pi Zero 2W, GPT-4o mini, VL53L5CX sensor, Python

- Co-led the design and development of an AI-powered assistive eyewear system in Python, integrating a Vision-Language Model (GPT-4o mini) with computer vision, speech recognition, and text-to-speech, with Wi-Fi/LTE connectivity as a fallback path for cloud-based AI processing.
- Achieved 89.53% object recognition accuracy and 100% semantic accuracy in testing; implemented I^2C-based distance sensing for obstacle detection (923.57 ms average haptic response) and earned a System Usability Scale score of 74.4 from testing with visually impaired participants.

EDUCATION

Bachelor of Science in Computer Engineering **2026**

University of Science and Technology of Southern Philippines – Cagayan De Oro City
